MANIK RAJ CHAURASIA

JAVA BACKEND DEVELOPER

+91 6207119945 | manik31raj@gmail.com | Gurugram, India | linkdein/manik31raj | github/manik31raj | Portfolio

PROFESSIONAL SUMMARY

Backend developer with hands-on experience in Java, Spring Boot, and REST API development. Skilled in building secure, scalable applications with authentication, database design, and system integration. Strong understanding of backend architecture and software development best practices.

TECHNICAL SKILLS

Core: Java, Spring Boot, Spring Security, Spring Data JPA, Hibernate
APIs & Messaging: REST API Design, Microservices, API Gateway, Kafka, Redis, JWT, OAuth2, Feign Client
Database: MySQL, relational schema design
Payments: Stripe API (sandbox + production flows), webhook handling
Testing & Tooling: JUnit, Mockito, Postman, Maven, Git, GitHub , Jira
Concepts: OOP, DSA, System Design, Design Patterns (Factory, Builder), RBAC, Spring AI, Exception Handling ,LLD

WORK EXPERIENCE

Software Engineer I | AVS Associates | Remote — Jan 2026 – Present

- Designed and developed backend REST APIs for a real estate commission and payout distribution platform using Java and MySQL.
- Implemented automated commission calculation logic for 4% direct referrals, 6% binary pair matching, and monthly reward bonuses.
- Built secure authentication and authorization using Spring Security, JWT tokens, and Role-Based Access Control (RBAC).
- Developed scheduled cron jobs and batch processors for automated volume calculations, tax deductions (TDS), and payroll/ledger reports.

Java Developer Intern | HulkHireTech | Hyderabad,India — Jul 2025 – Sep 2025

- Built Stripe payment service using Spring Boot with webhooks, status tracking, and retry logic across 3 microservices
- Developed 10+ REST APIs for payment initiation, status polling, and notifications; tested via Postman
- Integrated Spring AI (OpenAI) for context-aware error handling and improved debugging

Backend Developer Intern | Infosys Springboard | Remote — Oct 2025 – Dec 2025

- Developed backend for ride-pooling system using Spring Boot and MySQL
- Secured APIs with Spring Security, JWT, and RBAC (rider/driver/admin roles)
- Designed normalized MySQL schema (5+ tables) with indexing for efficient queries

PROJECTS

Expense Tracker

- Build a microservice based expense tracker with 5 different services.
- Implementing JWT-based authentication and secure API access and Redis to restrict use of same token after logout.
- Introduced Kafka for asynchronous communication and Feign Client for synchronous communication.
- Build 50+ Rest API endpoints with role-based access.
- Implemented Global Exception Handler for proper exception handling.

Stripe Payment Integration System | link

- Built a microservices-based payment system using Spring Boot and MySQL
- Applied Factory and Builder design patterns for maintainable architecture
- Enabled real-time payment status tracking via REST APIs

Smart RideShare Application | link

- Developed a scalable backend system for ride-sharing platform
- Designed REST APIs to manage users, trips, and transactions
- Integrated Stripe API for seamless real-time payments

EDUCATION

B.Tech in Computer Science | Alliance College of Engineering and Design, Bengaluru | CGPA: 7.7 — 2021 – 2025
